The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over

Tanaka et al, EP 987261 cited by applicants. It shows the reaction of ethylene glycol with glutaraldehyde to form a mixture containing 2-(3-formylpropyl)dioxolane, the diacetal of glutaraldehyde, unreacted glutaraldehyde and unreacted ethylene glycol, followed by distillation for the formylpropyldioxolane. See p. 8, line 36 for the distillation of the mono-acetal.

Further see EX. II-I on p. 13 where 318g of the monoacetal of glutaraldehyde are distilled and the remaining bottoms comprise the bis-acetal.

It would have been obvious for one of ordinary skill in the art to use the known instant distillation procedures or apparatus, i.e. divided column, in the method of Tanaka et al.
